The **BEAT**, previously known as the Monthly Market Monitor, provides connectivity between changing market events and implications for investor portfolios.

Spanning Bonds, Equities, Alternatives and Transition\*, this monthly review provides timely information across a broad array of markets and investment topics.

Each edition explores investment ideas, identifies areas of focus and provides a comprehensive outlook on asset allocation — all supported by a concise review of economic and asset class data through clear and impactful charts.

We believe The **BEAT** is a critical desk reference that enables more informed discussion and understanding of financial markets.

If you are viewing this book on your computer or tablet, click or tap on the section box to jump to the beginning of each section.

Data provided is for informational use only. See end of report for important additional information.

<sup>\*</sup>Transition is an asset allocation view, which refers to cash, cash equivalents or liquid short-duration assets, such as short-dated Treasuries, that can be used to "transition" to other asset classes.

## Key Themes for May 2025

#### Loss of Faith in U.S. Assets?

No! We think the narrative in which there is a loss of trust and faith in U.S. assets - including the U.S. dollar's (USD) reserve currency status - is a great extrapolation and exaggeration of the truth. We believe the USD's performance has mainly been tied to U.S. equity asset performance over the last several years. This prompted an exponential rise in foreign assets converting local currency into USDs to buy U.S. assets. As equity prices fell, there was a repatriation of USDs back into local currency, causing the USD to fall. This spilled over into U.S. Treasuries (USTs) as well. There are many other factors at work, but we think this is the main one. Once a clearing price is reached to adjust for current risks, the USD and assets will resume more traditional relationships.

#### Where's the Put?

The Fed, or Trump, Put. A common question asked is where the "policy put" may reside in the markets. The reference is the "Fed put" where the Fed may ease policy to support a weakening equity market. The "Trump put" refers to where communication around tariff and fiscal policy may change to support the equity market. Judging by recent history, the communication on tariff policy changed when the S&P 500 fell toward the 4850 level, so this may represent a support level for equities. But the monetary policy side may be more complicated because inflation is running higher than target, making the Fed more reluctant to cut. However, the Fed may respond more to a rise in the unemployment rate to 4.5% or higher than to a level in the equity market. So, there may still be a Fed put, but it's struck against the 4.5% unemployment rate.

#### **High Correlation Risks**

Equities vs. Bond Returns. It's not supposed to work this way! Longer duration bond yields rose as equities sold off, leaving many to question if there is loss of confidence in USTs. We do not think this is the case, rather there is a technical explanation: 1) Equity and bond return correlations have been rising for the last several years and historically become more highly correlated when inflation persists above the 2% target level; 2) A technical unwind of the "basis trade" (short bond futures v. USTs). Many "fast money" players had this levered arbitrage position on and were forced to rapidly sell USTs to raise cash against falling equity prices. This was a large part of the reason Treasury bonds sold off when equities fell.

#### **Fiscal Policy Is Up Next**

From Tariffs to Taxes. We explained the three components to Trump's policy process: 1) deregulation, 2) tariffs and 3) taxes. 1 & 2 are underway, now we start on 3. So far, Trump's budget has been voted on and approved to be done through a procedural process called reconciliation, which only requires a simple majority, making it easier to pass. In addition to making the 2017 Tax Cut and Jobs Act (TCJA) permanent, there may be an increase in State and Local Tax (SALT) deductions and possibly a reduction in corporate taxes, et. al. None of this is known at the moment, but between the potential for tariff negotiations and the possibility of friendly tax policy, there could be some positive offsets to the negative news surrounding tariffs in April. Will the positives outweigh the negatives? Probably not, but given how negative sentiment has become, positive news has the potential to punch above its weight.

The views and opinions expressed are those of the Portfolio Solutions Group at the time of writing of this presentation and are subject to change at any time due to market, economic, or other conditions, and may not necessarily come to pass. Not to be construed as an investment or research recommendation.

## The Portfolio Solutions Group – Our Top 5 Ideas

#### **Adding Duration**

Dislocation in USTs present a buying opportunity. As stated, we see the rise in UST yields as mainly technical in nature and we do not believe they are losing safe-haven status. The backup in UST yields is largely due to an unwinding of the basis trade, a leveraged way to own USTs, that was rapidly unwound to raise cash by fast money traders as equities sold-off extremely quickly. If the U.S. economy is slowing due to tariffs, and recession risks are rising, we then believe longer duration USTs have both outright and hedging value to investors. Additionally, the Fed is very capable of managing a disorderly sell-off of USTs, where we think they will readily intercede to provide support if needed.

#### Taking a Breather in Emerging Market Debt (EMD)

Tactically reducing an asset class that has outperformed. For a given credit rating, EMD generally offers spread pickup versus corporate credit. Today, spreads versus corporate credit look expensive compared to historical averages, albeit still slightly positive. This is understandable as the USD has weakened versus most currencies, making it easier for countries to repay their USD debts. However, with the global economic outlook uncertain, we are cautious that the EMD outperformance may have gone too far and think better relative entry points may appear in the future.

#### **Adding to Municipals**

Attractive relative value. Following April's selloff, yields in the municipal bond market are well above one standard deviation wide compared to the index's five-year average. From a relative value perspective, muni-to-treasury ratios look increasingly attractive, rising to over 90% on some parts of the curve. We continue to see relative value in this segment of the credit markets.

#### **Europe Is Not Germany, and Germany Is Not Europe**

Increasing exposure to Germany. In Europe we continue to look for market segments that are relatively less exposed to tariff risks, and are direct beneficiaries of the nascent fiscal stimulus wave. German mid-caps fit this bill, as the incoming government's agenda seeks to prioritize re-industrialization by incentivizing equipment and infrastructure investments, cutting bureaucratic red tape and reducing energy costs. While this will have benefits for the broader European ecosystem, we think German mid-caps will stand to benefit the most.

#### **Exiting Materials Overweight**

When all that glitters is gold. Earlier this year we initiated an overweight in U.S. materials to gain leverage to a burgeoning recovery in U.S. manufacturing and manufacturing Purchasing Managers' Indexes (PMIs). While we saw some green shoots emerge in early 2025, a worse-than-expected tariff outcome has effectively halted the recovery and sent PMIs back into contraction. While we do expect an eventual recovery in the U.S. manufacturing sector, we opted to exit our overweight position because weaker consumer demand and slower growth pose meaningful headwinds. Despite these challenges, the sector has outperformed the index YTD, but much of that is attributable to its metals and mining segment, where gold miners continue to benefit from the record rally in gold prices.

## The U.S. Dollar: Strong and Still a Reserve Currency

The performance of the USD is very much tied to flows from foreign demand to hold U.S. assets. Total foreign holdings of U.S. assets grew exponentially following the Global Financial Crisis (GFC), which has been supportive of the USD.

## Credit Spreads Have Widened to Longer Term Averages

After displaying some resilience to the initial derisking in U.S. equities, credit spreads have widened from all-time tight levels back to medium-term averages. Investment Grade (IG) spreads have returned to 5-year averages, while High Yield (HY) spreads briefly broke above their trailing 10-year average.

# IG and HY Credit Spreads Have Widened to Levels at or Above Recent Historical Averages IG average spread (LH chart); HY average spread (RH chart)

## Tariff News Has Steepened the Curve and Tightened Financial Conditions

Recent tariff announcements have contributed to both the rapid steepening in the yield curve (measured by the 2Y/10Y spread) and the tightening in financial conditions. This has also driven a divergence in monetary policy expectations, with the implied Dec 2025 Fed funds rate falling below the Fed's projected level (median dot as of 3/19/2025).

Tariff Uncertainty Has Tightened Financial Conditions... 2Y/10Y spread (LH, basis points), U.S. Financial Conditions Index (RH)

## International Equities Long-Term Relative Performance Hits Historic Lows

Developed markets ex-US equities persistently underperformed the U.S. for over 15 years. While ex-US equities have seen notable year-to-date (YTD) outperformance, the magnitude is small in the context of the long-term trend. The shift in U.S. trade policy marks a significant realignment of global economic relationships. While much remains uncertain, it is reasonable to question if this marks a longer-term inflection in regional equity performance.

International Equities Long-Term Relative Performance vs. U.S. is ~2 Standard Deviations Below Trend MSCI World ex-US/MSCI U.S. relative index ratio with long-term trend and standard deviations (log scale)

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass. Past performance is not indicative of future results.

## Cyclicals vs. Defensives: The Recent Move Placed in Historical Context

Amid heightened tariff policy concerns and weaker GDP growth estimates, cyclicals have underperformed defensives in the U.S. YTD 2025. With recent underperformance, cyclical sector valuations relative to defensives have now returned to levels consistent with the slowdown in 2022, with greater moves limited to the GFC and the pandemic.

### U.S. Cyclical Sector Relative Valuations vs. Defensives Have Returned to the Levels of the Slowdown in 2022

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass. Past performance is not indicative of future results.

### Without Corrective Measures, the Deficit Can Get Worse

In the absence of significant corrective measures, the deficit can grow over the next decade. The current policy baseline, including a TCJA extension, with \$1.5 trillion in deficit reduction, would serve to keep the deficit at current levels.

#### The Deficit Can Grow Unless Corrective Actions Are Taken

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass. Past performance is not indicative of future results.

# Exit U.S. Materials: Trade Headwinds Have Halted Manufacturing Recovery

While we continue to expect an eventual recovery in U.S. manufacturing, the sector faces nearer-term headwinds in the form of higher-than-expected tariffs, weaker consumer demand and weaker global growth. While a recovery looked to have been in play in 2025, recent dynamics have reversed that trend, sending PMIs back into contraction.

Forward-Looking Manufacturing PMI Surveys Have Dipped Back Into Contraction Following Nascent Recovery Regional Fed surveys, 6-month forecasts for new orders

### Municipal Bonds: Elevated Starting Yields and Relative Value

After April's selloff, yields in the municipal bond market are well above one standard deviation to the index's 5-year average. From a relative value perspective, muni-to-treasury ratios are attractive, rising to over 90% on some parts of the curve. Between elevated starting yields and compelling relative value, we believe now is a great entry point for the asset class.

# Index Yield-to-Worst is Wide Compared to Historical Averages Muni index YTW (%) with 5Y average with +/- 1 standard deviations

Muni/UST	4/30/25	12/31/24
2-year	78%	67%
5-year	79%	66%
10-year	79%	65%
30-year	92%	74%

## Real Estate Fundamentals Continue to Improve

Real estate has been experiencing a repricing over the last few years in response to higher interest rates, cyclical oversupply and, in certain sectors, secular demand destruction. That said, the long-term operating outlook is markedly improving, with future supply materially decreasing and the demand destruction seen in certain sectors stabilizing. Entry pricing is meaningfully lower, providing a margin of safety and an interesting access point to improving fundamentals.

### Capital Markets Investment Framework

Representative Allocations from the Portfolio Solutions Group

Current allocation
Change from previous

- -- High conviction underweight
- Underweight
- = Neutral
- + Overweight
- ++ High conviction overweight

We view the recent backup in UST 10Y yields as more technical in nature, and so we move to a neutral duration stance. With slowing economic growth and recession risks in focus, longer duration USTs have both outright and hedging value to portfolios.

Commentary

Credit spreads widened towards longer term averages after "Liberation Day" but have since tightened again. With the current economic and political uncertainty, we still view credit spreads as being asymmetrically exposed to negative news, with limited upside from today's levels.

With tariff policy presenting near-term headwinds to growth, we move our risk exposure in equities to neutral primarily through reductions in the U.S. We prefer Europe, where the growth outlook has benefitted from expansionary fiscal policy, growing real incomes and relatively supportive financial conditions.

Private investment activity has been subdued YTD as investors cautiously interpreted announcements to changes in U.S. Fed policy, including their interaction with global geopolitics. However, we believe the directional clarity of the new administration and the continuing maturation of relatively low-cost financing are expected to expand deal-making activity in 2025. In addition, attractive entry prospects have emerged within sub-segments of real estate, private equity and private credit, but investor commitment levels have not yet responded to this heightened level of opportunity.

Market activity YTD disrupted many fundamental hedge fund alpha themes, particularly in long/short equity portfolios. We continue to favor macro and relative value strategies that are able to capitalize on high levels of dispersion.

We remain neutral on energy commodity markets, as geopolitical upside risks are balanced by high spare capacity in markets such as crude, which limit upside absent physical disruptions. In the current environment we see precious metals as a segment that could enjoy structural tailwinds.

We remain underweight cash and short duration instruments.

### Global Fixed Income

Representative Positioning from Portfolio Solutions Group

Current allocation
Change from previous

- -- High conviction underweight
- Underweight
- Neutral
- + Overweight
- ++ High conviction overweight

We move to a neutral duration stance in the U.S. with 10Y yields now ~4.40%. With slowing economic growth and recession risks in focus, longer duration USTs have both outright and hedging value within portfolios.

Commentary

With breakeven inflation falling, we see a bit of value in this space, particularly in the longer sections of the curve with 5Y/5Y inflation at 2.20% today. We envision inflation settling higher than 2% over the long run.

We remain neutral European duration, as Germany's fiscal pivot is likely to result in a higher trading range for European rates compared to post-GFC.

EMD has had wider spreads than corporate credit for the better part of the past 15 years. But currently, those spreads are much tighter than they have been historically. Investors still get additional spread pickup from EMD and creditworthiness has generally improved with the weakening USD. As such, we remain neutral EMD.

EM Local presents an interesting opportunity with the USD recently weakening. The USD move has been violent and abrupt, so we are hesitant to recommend a tactical overweight today in case we get a temporary USD bounce. However, we like the asset class on a longer-term perspective.

Muni-to-treasury ratios are at attractive entry levels that usually offer strong after-tax returns relative to USTs. For taxable accounts, we recommend increasing muni allocations.

IG spreads have widened a bit but remain tight given the number of risks out there. The asset class has poor convexity in the current environment.

We continue to hold a high conviction in ABS as yield per unit of credit quality remains attractive.

HY spreads have widened from all-time tight, but remain very expensive, and we do not like the convexity the asset class offers. EU and U.S. HY spreads have notably converged.

Bank Loan spreads have widened and we considered an upgrade to overweight. However, we are still concerned about the backdrop and idiosyncratic credit risks that may appear as we get more tariff data. There is not quite the margin of safety we prefer.

## **Global Equity**

Representative Positioning from Portfolio Solutions Group

Current allocation
Change from previous

- -- High conviction underweight
- Underweight
- = Neutral
- + Overweight
- ++ High conviction overweight

**United States:** We move to neutral on U.S. equities, as larger-than-expected tariffs present dual headwinds in the form of a) weaker economic growth and b) higher inflationary pressures, while ex-US regions primarily face demand effects.

Commentary

**Europe:** We remain overweight European equities with the growth outlook benefiting from several factors: a) more fiscally expansive stance, b) rising real incomes supporting consumption; c) financial conditions relatively more supportive than in the U.S. We continue to prefer segments of the market that are less exposed to tariffs and directly benefit from the nascent fiscal stimulus wave, such as banks, construction and German mid-caps.

**Japan:** We remain neutral Japanese equities given the scope for rates to increase further and the JPY (yen) to re-value more strongly from a still extremely cheap Real Effective Exchange Rate perspective. We remain optimistic about Japan's structural reforms and longer-term prospects.

**Emerging Markets:** We move to neutral on EM via reduction in our exposure to Chinese equities, where large scale tariffs and subsequent retaliatory measures have shifted the balance of risks back to the downside.

While we are not looking to take on any excess Big Tech exposure, recent underperformance should help mitigate some of the valuation risk in Growth style indexes.

With a weaker Growth outlook, we continue to prefer Quality.

Lower quality Small-caps are still best avoided. We prefer Mid-caps, where we hold exposure in both the U.S. and Germany.

Our current cyclical exposure sits in Europe and rests more on structural growth drivers.

For informational purposes and does not constitute an offer or a recommendation to buy or sell any particular security or to adopt any specific investment strategy. The tactical views expressed above are a broad reflection of our team's views and implementations, expressed for client communication purposes. Individual team allocations may differ. The information herein does not contend to address the financial objectives, situation or specific needs of any individual investor. ### **Alternatives**

### Representative Positioning from Portfolio Solutions Group

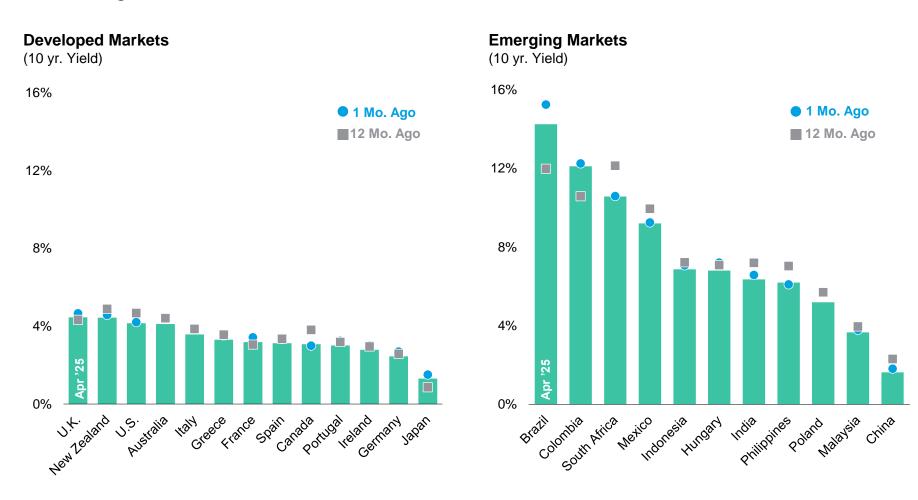

Alternative Assets	Commentary
Private Markets	
Private Equity	We expect investor cash flows to recover through increasing market activity and asset pricing to offer a fair entry point. We anticipate an increase in performance dispersion going forward, with successful value creation likely being associated with organic growth initiatives utilizing relatively modest leverage, participation in technology advancements, resiliency to upside inflation surprises and successful navigation of adjustments in global trade. We continue to focus on middle-market strategies that rely less on leverage and are well-placed to deliver asset management initiatives to drive this form of earnings growth. Overall, we view the private equity universe as an important diversifier relative to public equities, given lower overall exposure to imports and exports.
	Commercial real estate is working through its debt maturity wall and pockets of elevated supply, leading to increased transaction volumes at more attractive entry valuations. These reset valuations and retreat of bank lending have created interesting opportunities for commercial real estate lenders. At the same time, fundamentals are constructive, as debt liquidity improves and the future supply in key sectors is materially lower, setting up an attractive opportunity set for commercial real estate equity as well - particularly in secularly growing sectors including industrial, residential and net lease.
Private Real Assets	Private infrastructure continues to participate in the investable opportunities relating to the mega trends of digitization and power generation. These themes converge where data services require power, and generative Artificial Intelligence (AI) is highlighting the fact that the current power mix is insufficient in terms of volume, density and reliability. Private investors are playing a key role in supplying this enabling infrastructure with attractive growth prospects. Recently observable policy changes in the U.S., including high tariffs, are expected to destabilize supply chains. BESS (Battery Energy Storage Systems) are most at risk given reliance on both Chinese materials and manufacturing. Solar PV is also expected to face challenges, albeit not as extreme, given larger onshore manufacturing capacity. The environment is expected to put pressure on poorly capitalized developers. As a result of an expected decreased reliance on the U.S., we view the European infrastructure segment as a net beneficiary. There will be even more focus placed on energy security and localizing critical data which is currently being stored in the U.S. The recent announcement of the €500 billion German Infrastructure Fund is the first in what we expect to be many steps to spur investment in the continent's ailing infrastructure.
Private Credit	Within corporate lending, covenant relief cases and PIK (payment-in-kind) payments have increased as debt service continues to be burdensome. This is providing opportunities for opportunistic and special situation lenders that focus on opportunities that fall outside the purview of direct lending mandates.
Liquid Alternatives	
Hedge Funds	YTD market activity disrupted many fundamental hedge fund alpha themes, particularly in long/short equity portfolios. We continue to prefer specialist hedge fund portfolio managers best positioned to analyze and adapt to the potential impacts of a multitude of stimuli, including tariffs, a rapidly evolving AI landscape and concerns over the path of economic growth and resultant policy responses. Highly liquid macro strategies have been responsive to rapidly changing market dynamics, and we believe will continue to contribute to performance should broader volatility persist. We maintain our high conviction in relative value strategies able to capitalize on high levels of intra-market dispersion.
Commodities	We remain neutral on energy commodity markets as geopolitical upside risks are balanced by high spare capacity in markets such as crude, which limit upside absent physical disruptions. In the current environment we see precious metals as a segment that could enjoy structural tailwinds.

The **BEAT** | May 2025

expressed above are a broad reflection of our team's views and implementations, expressed for client communication purposes. Individual team allocations may differ. The information herein does not contend to address the financial objectives, situation or specific needs of any individual investor. The signals represent the Portfolio Solutions Group view on each asset

class. Note: Over/underweight in private markets refers to decisions regarding the flow of new investments, not the stock of existing investments.

See end of report for important additional information.

**Municipal-to-Treasury Yield Ratios** are relative value indicators that measure the richness or cheapness of Municipal bond yields to comparable maturity Treasury bond yields.

### Terms

**Yield to Worst** is a measure which reflects the lowest potential yield earned on a bond without the issuer defaulting. The yield to worst is calculated by making worst-case scenario assumptions by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

### About Risk

Bank Loans - There can be no assurance that the liquidation of collateral securing an investment will satisfy the issuer's obligation in the event of non-payment or that collateral can be readily liquidated. The ability to realize the benefits of any collateral may be delayed or limited. Commodities - The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity including weather, embargoes, tariffs, or health, political, international and regulatory developments, Credit -Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. **Duration** – Securities with longer durations tend to be more sensitive to interest rate changes than securities with shorter durations. Equity - Equity investment values are sensitive to stock market volatility. Foreign - Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, or other conditions. In emerging countries, these risks may be more significant. Gov't Agency - While certain U.S. Government-sponsored agencies may be chartered or sponsored by acts of Congress, their securities are neither issued nor quaranteed by the U.S. Treasury. Income Market - An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. There generally is limited public information about Municipal issuers. Inflation-Linked - Interest payments on inflationlinked securities may vary widely and will fluctuate as principal and interest are adjusted for inflation. Investments in inflation-linked securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index. Interest Rate - As interest rates rise, the value of certain income investments is likely to decline.. Lower-Rated - Investments rated below Investment Grade (typically referred to as "junk") are generally subject to greater price volatility and illiquidity than higher rated investments. Maturity - Longer-term bonds typically are more sensitive to interest rate changes than shorter-term bonds. Preferred Stocks - When interest rates rise, the value of preferred stocks will generally decline. Prepayment - MBS - Mortgage-backed securities are subject to prepayment risk, Prepayment - Bank Loan - Bank Loans are subject to prepayment risk, Real Estate - Changes in real estate values or economic downturns can have a significant negative effect on issuers in the real estate industry, including REITs.

### ADDITIONAL INFORMATION

### **Risk Considerations**

Diversification does not eliminate the risk of loss.

In general, equity securities' values also fluctuate in response to activities specific to a company. Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries. Fixed income securities are subject to the ability of an issuer to make timely principal and interest payments (credit risk), changes in interest rates (interest-rate risk), the creditworthiness of the issuer and general market liquidity (market risk). In a rising interest-rate environment, bond prices may fall and may result in periods of volatility and increased portfolio redemptions. In a declining interest-rate environment, the portfolio may generate less income. Longer-term securities may be more sensitive to interest rate changes. Alternative investments are speculative, involve a high degree of risk, are highly illiquid, typically have higher fees than other investments, and may engage in the use of leverage, short sales, and derivatives, which may increase the risk of investment loss. These investments are designed for investors who understand and are willing to accept these risks. Performance may be volatile, and an investor could lose all or a substantial portion of its investment.

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the Strategy include a number of securities and will not necessarily track the performance of any index. Please consider the investment objectives, risks and fees of the Strategy carefully before investing. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.
